

A large crowd of people is gathered in a grassy park, many sitting on blankets and having picnics. In the background, a tall construction crane is visible against a cloudy sky. The scene suggests a public gathering or festival.

Is survival
possible
without
vaccinations?

Mark the Prepper Guy

Do we need vaccinations?

It appears that if you believe that the MMR, and so many other, vaccinations are not necessary you are a cooke, and one of those “anti-vaxxers”, you know, “Tea-Bagger”, “Knuckle Dragger”, and most likely think that Global Warming is a myth.

Why you ask, well dummy, the science is conclusive, there is no survival without vaccines, all the media hacks, that are smarter than you and I say so, hence we are Neanderthal knuckle draggers, got it?

So let's look at this with some common sense, or Redneck Logic. I mean what the hell, that's what the elite think of common sense, and it gives them so much joy to see monkeys try to figure things out.

Back in the day

Our Kinfolk and there youngins before the 60's all got “The Mumps and The Measles”, and sense they lived to have offspring, that's us, why did we ever need these vaccinations?

Evidence has been published in the medical literature that vaccinated persons can get measles because either they do not respond to the vaccine or the vaccines efficiency wanes over time.

[PubMed.gov](#)

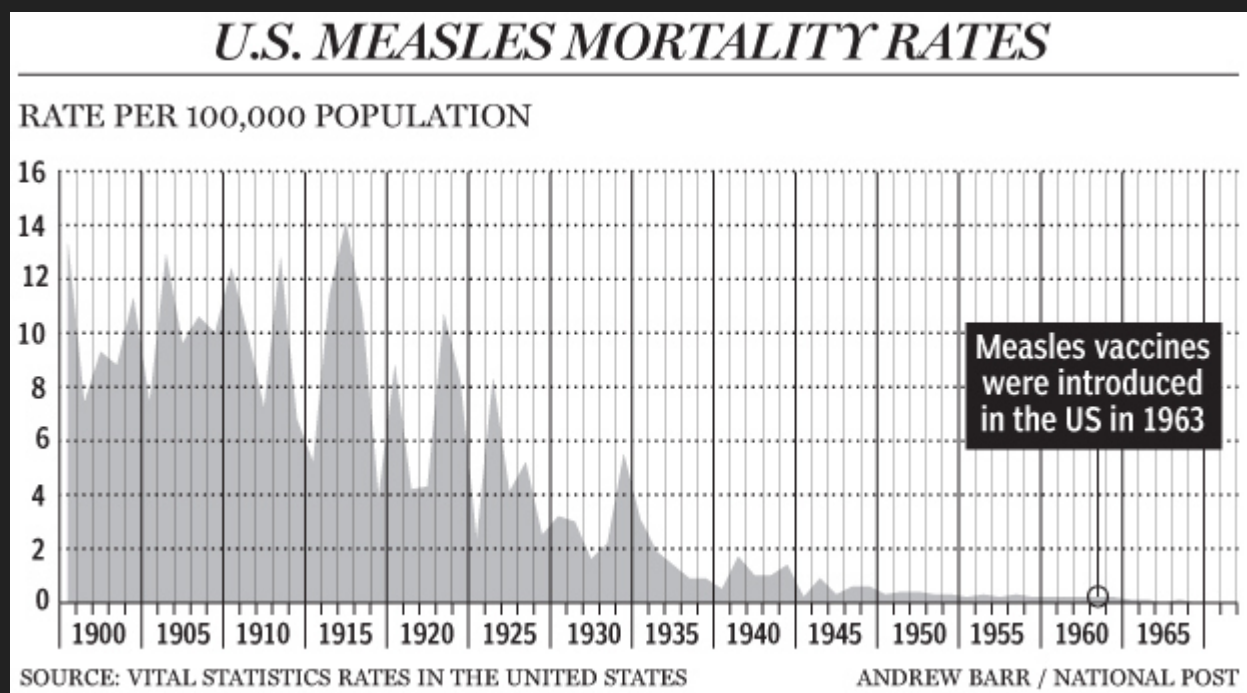

An outbreak of measles occurred among adolescents in Corpus Christi, Texas, in the spring of 1985, even though vaccination requirements for school attendance had been thoroughly enforced. 99 percent had records of vaccinations with live measles vaccine. We conclude that outbreaks of measles can occur in secondary schools, even when more than 99 percent of the students have been vaccinated and more than 95 percent are immune.

Nature vs Big Pharma

***Vaccinated** mothers do not transfer long lasting maternal antibodies from their colostrum to their infants to protect them in the first few months of life.*

So it seems to me that those mothers that were lucky enough to have not been vaccinated, and are crazy enough to be breast feeders have healthier children. Several decades following (after) the vaccine's introduction, the measles death rate rose, largely because the vaccine made adults, expectant mothers and infants more vulnerable.

Early in the last century, measles killed millions of people a year. Then, bit by bit in countries of the developed world, the death rate dropped, by the 1960s by 98% or more. And then, the measles vaccine entered the market.

If the Mortality rates in the US dropped so precipitously over the 60 years before the vaccine then you'd think problem solved, right?

Not so much, you see there is no gain when a "Good Crisis" goes to waste, or evaporating all together.

Is survival possible without vaccinations

- In the 60's the Birth Control Pill was first marketed, as well as Valium and Librium, blood-pressure drugs and other heart-helping medications were developed.
- The 1960s forever changed not only the nature of medicine but also the *politics of our nation*.
- And of equal importance, a new *progressivism* took the stage, especially in the United States, where increasing demand for access to health care and protection from unsafe and fraudulent medications once more led to an *increased federal presence* in the process of drug development, manufacturing, and marketing.

So why on Gods Green Earth do the elitists not embrace this information? It follows Darwin's theory of evolution, and they Love that Crap? must be some other agenda. Well let's look shall we?

No wonder a generation of baby boomers was poised to demand a pill or vaccine for any and every ill that affected humankind—pharmaceutical protection from unwanted pregnancies, from mental upset, from disease.

Rising expectations were reflected in the science and business arenas, where research was promoted and industry driven to attack a greater variety of human ills with the weapons of science. [Tidbits gathered from.](#)

It looks as though Big Pharma was born in the 60's and we all know that Reagan so simplistically and eloquently pointed out Big Government beliefs, If it moves, tax it. If it keeps moving, regulate it. And if it stops moving, subsidize it. Big Pharma has been on the move for quite some time.

These 3 curses all work against us these days and muddy the water so much so that we just comply.

Don't get the MMR shot and your kids can't go to Public School, that would sound great, but many States won't allow that as an option. Then I will Home-school, that's great if we weren't so Taxed that it takes 2 or more incomes these days to survive. With Big Pharma,

Tax It, Regulate It, and Subsidize It.

Big Government, Gynormas School Unions, Dept. of Education, HHS and many many more overlapping gangs, we as citizens (Plebs) are so overwhelmed that we should just shut up and get the shot.

The facts are conclusive.

- Measles were on the way out without government involvement.
- People had better immune systems before the vaccine.
- The government spent 3 billion on case settlements.

But, the government and the media fail to mention all the facts.

- In Orange County Ca. for example, they say nearly half the cases were from unvaccinated individuals, but leave out that the other half were vaccinated individuals,
- Choking is a leading cause of injury and death among children.
- Drowning, Heart Attacks, Severe Allergic Reactions, Electric Shock, Drug Overdose and Suffocation

Not seeing Measles? me either. If a child gets the measles, the chances of death are .0023% and that may look like a small number unless it's your child.

But there are other things to worry about and I wonder why this is such an issue *today*. In the pre-vaccine era, when the natural measles virus infected the entire population,

Measles was considered to be "*typically, a benign childhood disease*," as Clinical Pediatrics described it, and was welcomed for providing lifetime immunity, thus avoiding dangerous adult infections.

In today's vaccine era, .

Is survival possible without vaccinations

Bigger Fish to Fry!

Autism is a disorder that many people have different views on. Autism is a post traumatic stress disorder that children suffer from, and vaccines play some role but is not the sole reason why autism occurs.

Stress is something that is discussed in this video and also how these stressors act on the body.

Is the Good Doctor onto Something?

As best we know, antibiotics do not interact with the cells and molecules of the immune system, so there is no simple mechanism through which they could weaken the immune system.

However, consider this: many bacteria secrete molecules which modulate the activities of the immune system.

Is survival possible without vaccinations

Vaccines are like a training course for the immune system. They prepare the body to fight disease without exposing it to disease symptoms. When foreign invaders such as bacteria or viruses enter the body, immune cells called lymphocytes respond by producing antibodies, which are protein molecules.

A round of antibiotics permanently changes the immune system, as it indiscriminately kills bacteria, antibiotic drugs are not selective in choosing which bacteria to kill. Since the good bacteria is killed along with the bad bacteria, the body's ability to manufacture appropriate immune cells is altered.

Two new international studies have shed further light on some of the harmful side effects associated with antibiotics – including damage to the immune system, and memory problems caused by a lack of growth in new brain cells.

The findings serve as a reminder that while antibiotics can be powerful allies for the human body in the fight against disease, it can be a two-edged sword.

When disease germs enter your body, they start to reproduce. Your immune system recognizes these germs as foreign invaders and responds by making proteins called antibodies. These antibodies' first job is to help destroy the germs that are making you sick. They can't act fast enough to prevent you from becoming sick, but by eliminating the attacking germs, antibodies help you to get well.

The antibodies' second job is to protect you from future infections. They remain in your bloodstream, and if the same germs ever try to infect you again — even after many years — they will come to your defense. Only now that they are experienced at fighting these particular germs, they can destroy them before they have a chance to make you sick. This is immunity. It is why most people get diseases like measles or chickenpox only once, even though they might be exposed many times during their lifetime.

All of these facts tend to contradict all the so called experts as to why we need vaccines in the first place. Why do they prescribe Antibiotics if it kills the Good, and the Bad antibodies' and will harm our immune system?

I believe that Doctor Ellis is correct in his statement that we tend overuse Antibiotic and therefore harm our childrens immune system, requiring boosters after booster.

I feel, and in my opinion, that what actually triggers Autism, is not the ingredients, in part or in whole, but the Stress caused by the vaccines. No child, or person would ever contract all of the diseases at one time, yet these vaccines are given all at once, and may trigger the human brain to react. Remember that antibiotics can cause a lack of brain cell growth also, and with young children under 2 years old, it could be the detrimental to their developing brain.

If science could isolate a particular ingredient, or combination of ingredients, that could cause Autism, they would have one Hell of a weapon to use, but they don't, and this is why they argue against any of this being the fault of the vaccine itself.

About the Author

Mark the Prepper Guy, born in 1954, has been involved in Preparation and Survival for more than 40 years. With prepperguy.com and sovereignstateproject.com he blogs and podcasts about prepping, nutrition, politics and philosophy.

He is a minimalist prepper and believes that all people can survive most doomsday events with the proper mindset. Skills are the second most important item in our mental kit, followed by gear.

The U.S. Constitution is his scripture and in that regard is a fundamentalist in his interpretation and writings on his blog in the sovereignstateproject.com site.

He is a 3rd generation AZ native and believes that Arizona is sovereign, just like all the other States. Mark hated school, loved college and now has a ferocious appetite for all things knowledge. Listens to audiobooks on any subject but mostly apocalyptic series, science fiction, loves Ayn Rand as an author, and believes The Count of Monte Cristo is the greatest book written on survival and mindset.

What he now brings to his writing is a belief that while seeking an answer to a problem, we must look in the junkyard of information and knowledge for the missing piece, and even if what we find is not from the same manufacturer, or dogma, but the piece fits or can be modified, than we are closer to the solution.

Because knowledge is man-made, then it is reasonable to think that we can massage it into our beliefs, and vice versa.
